Subject: Dow Key 110vac Coil
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

Fellow Boatanchors,

I am in need of a Dow Key 115 volt AC relay COIL. The removable coil is the one that is encased in a tubular metal housing with the two small 115 vac tap points. The coil is attached my two machine screws to the machined rectangular main relay body housing. External contacts are good as is the RF SPST arm and contacts. I know this is probably a rare item, but if you think you may have one, please dig around in your parts boxes just before you doze off before the TV this evening for the second night while awaiting the pre-semi-projected final count for the election.

My relay starting buzzing like the GOP and DEM headquarters during the wee hours of this morning. There will be really a winner soon. I just need a RELAY (coil) winner sooner HI.

Please don't fault me for being a born and raised registered Flawda Cracker here in Pensacola. Yesterday I did my duty and voted early, and often. I can't help it if we can't count past our fingers and toes in the Sunshine State.

Station is a Ranger II and 75A-4.

Thanks much in advance.

Regards,

tnx es 73 de w4rl rob pensacola

Hi Gang:

I am looking for 7 small knobs found on the HQ-140-X (same as the HQ-150).
Coin of the realm gladly paid. Can anyone spare a few or a set?

Folks: The RG-187 A/U coax used with the "MB" connectors to connect the various modules on my Capehart-built is deteriorating. Would replacing the 75 ohm RG -187A/U with 50 ohm , like -316, cause any major or minor problems with reception. I'm mostly a SWL, not having the energy to really get into DX-ing, particularly now that Tristan da Cunha is off the S.W. bands. Your knowledgeable assistance would certainly be appreciated, Thank You, Jim Skladany.

I recently bought an SP-600 JX-10 at the Rickreall Oregon swap meet. A friend of mine has one of the same model which is almost exactly the same. They both have National Bureau of Standards property tags and have the same factory mods. The crystal phasing knob is just a dummy control (the transformer can it would normally go into doesn't even have a hole in the side for the shaft to enter) and the selectivity switch has only three non-crystal selectivity positions marked 0.4, 2, and 10 kc.

I'm really curious what these receivers were used for and why they were ordered without the crystal filters. Any opinions?

regards,
Ron Hershey

Hi Folks,

I have an ElectroVoice 665C that a friend gave me...I want to use it but I can't figure out how to get the mic jack, UA-3-11, opened up so I can wire it. It has two screws that crimp a rubber flex jacket that extends about 1.5 inches out of the back of the plug. Other than that there seem to be no method to release the innards.

thoughts,
dave

Gang-

This is a reminder that reposting of For Sale or Wanted items from
other internet sources (lists and auctions) is discouraged....
nay prohibited on the BoatAnchors list.

If a BA list member wants to post the item elsewhere and on the BA list,
that creates NO problem. What we are trying to avoid are "seen on EBay"
or "prime rig on xxx list" type posts... Very few BA members limit their
searching to just the BA list!

The problem comes when the poster in the other venue is not asked about
the re-post... without the permission of the poster, problems are
guaranteed, and I do not have the time, the energy, or the desire
to address and deal with the headaches that re-posting causes... I'll
grant you that folks in other venues need to be re-calibrated, but I do
NOT want to referee! ;^)

So, henceforth, let's have NO re-posts from other sources referred to
the list. Yes, I know this may sound pretty provincial, but those who
really care have browsers and know where to look, and those who don't,
probably don't....

I do NOT need the aggravation of someone who posts to a newsgroup and
then has to fight off the hungry folks from the BA list who want to
rearrange his viewpoint or calibrate his selling technique.

ENOUGH! Already... Just don't do it!

I just received John Loughmiller's new book, "A Family Affair- the R. L. Drake Story." Although I have not had time to read it from cover to cover I am impressed with the content and the execution of his project.

As one who has done this before I am well aware of the time, energy and personal resources that are involved with books like this. Although I have little personal interest in Drake gear, I understand that its fans and supporters are just as devoted and enthusiastic as those of equipment I am more familiar with.

John's book will provide a handy and helpful reference book for anyone interested in vintage radios and I am very excited that it is now available. The R. L. Drake Company now joins Collins, Heath and Hallicrafters in having a first-class publication in the hands of vintage hams. Awareness of every manufacturer involved in our hobby is good for all of us and helps to promote interest in vintage radios. Now how about you National and Hammarlund guys?

Congratulations John (and to the contributors who assisted you) on a job well done!

The URL for the order site is: http://home.fuse.net/tsg/ for those who might have missed previous posts on the subject.

List -
Just want to put out an annual question if anyone has ever owned, seen, or heard vague rumors about a Barker & Williamson model 370 SSB *receiving* adaptor?? Mine's s/n 539.

I was recently tempted to auction it off, appearently being a truely rare itme, but found it interfaces very easily with the Halli SX-62A; just have to make up a cable with an old tube base on one end to plug into the detector socket and an RCA plug on the other end, plug & play the slicer and eleminate half the qrm.

Chuck,

What a coincidence!.. I just acquired a B&W 370 Receiving SSB Adapter last weekend along with a B&W 5100B. It looks to be in excellent condition though I've not yet tried it. I just ordered a manual for the model 370 from Alan Bernard (Alvin J Bernard <ni4q@juno.com>) who, if you don't know already know, makes superb manual copies.

The old B&W gear was really nicely made stuff. I plan to try some AM with it once I get it sorted out.

Does anyone have a nice B&W 51SB-B single sideband generator that is in need of a new home?

Regards,

Denis Sharon W1AOK

Content-Transfer-Encoding: 7bit

Got ahold of a little Galaxy V mkII.
Seems to fire up and all, but am getting no audio on SB-2. (on 80m for instance that's Upper side band.)
I can tune it up in that position like one is supposed to, but no audio when transmitting in that postion.
Have tweaked the sb caps and, while I haven't done the step by step alignment of this section (passband), to my ear, the static on the two sidebands sound the same when switching back and forth.
Any ideas where to start to align this thing?
Thanks to all in advance.
Bob.

If there's any one still up tonight with an interest in early radio, The History channel is running a show on radio signals from outer space at 2 AM Central Standard Time. The first 10 minutes or so have some interesting pictures of elderly radios, including some footage of Marconi operating an oversize telegraph key. The rest is only interesting if SETI (search for extraterrestrial intelligence) is of interest.

It is amazing how the staff at History, forced into a tabloid format, still come up with great material.

Regards,
Bill Hawkins

With the exception of the Collins service bulletin letters - which will be posted shortl - all of the Collins Service Bulletins for the KWM-2/2A are now posted on the CRA website.

This a free service of the CRA for those who need to download such information. When you go to the CRA website, you need to click on "Collins Service Bulletins" and then click on "Access Procedures" where you will file a request for your own unique personal password.

For the nearly 200 who have already been issued a password, then, as you know, you simply click on "To Go To" line. Then, enter your unique, personal code and password and "you're there."

The next "batch" of Collins Service Bulletins will be entered shortly for the 30L-1 only.

The CRA site is there for you to enjoy and benefit from. While you on the CRA site, you may as well join the CRA which is free. Thank you.

For your information:

Today, the CRA webmaster placed the Collins Service Bulletins for the 30L-1 amplifier on the Collins Radio Association's website at www.collinsra.com

Anyone out there have a 5.500mhz (lower sideband) crystal for a Swan
500CX?
Could use one if you do.
Thanks.
Bob.
